

## MAEDICA - A JOURNAL OF CLINICAL MEDICINE

1. **The following assertions about acne are true:**
  - a. Acne is induced by an estrogen induced sebum production
  - b. Acne produces follicular hyperkeratinisation
  - c. Acne is a chronic inflammatory disease of the pilosebaceum unit
  - d. Acne represents a rare diagnosis made by dermatologists
  - e. Excessive cleansing may lead to disruption of the epidermal barrier
2. **The detection methods of dental caries include:**
  - a. Quantitative light-induced fluorescence
  - b. Magnetic nuclear resonance
  - c. Electrical conductivity
  - d. Orthopantomography
  - e. Dental radiography
3. **In the evaluation of total knee arthroplasty:**
  - a. The sagittal plane is used
  - b. The axial plane is used
  - c. In the axial plane we may evaluate both the femur and the tibia
  - d. The patellar height is examined in the axial plane
  - e. The patellar tendon angle is evaluated in the sagittal plane
4. ***Chlamydia trachomatis*:**
  - a. Is a Gram-positive coccoid bacterium
  - b. Causes the most common sexually transmitted infection
  - c. Constitutes the most common infectious disease in the USA
  - d. Lives as an obligate parasite in living cells
  - e. May produce vaginal bleeding
5. **Dual energy X-ray absorptiometry (DEXA) scan should be given to:**
  - a. Women with untreated premature menopause
  - b. Men with primary hypogonadism
  - c. Women with acute rheumatological disorders
  - d. People with a body mass index of less than 19 kg/m<sup>2</sup>
  - e. People with evidence of osteopenia cardiomyopathy
6. **In multiple sclerosis, pain may manifest as:**
  - a. Tingling
  - b. Burning sensation
  - c. Electrical sensation
  - d. Cramping
  - e. Cold sensation
7. **Drug reaction with eosinophilia and systemic symptoms:**
  - a. May involve multiple organs
  - b. Is a rare manifestation (less than 1 in 100 000 exposures)
  - c. Is associated with cortisone therapy
  - d. May present with fever
  - e. May present with hematological abnormalities
8. **Myotonic dystrophy:**
  - a. Has two main clinical forms: DM1 (Steinert) and DM2 (Ricker)
  - b. Its DM2 clinical form has a worse prognosis
  - c. Produces arrhythmias
  - d. Produces conduction abnormalities
  - e. Produces ventricular dysfunction
9. **Cardiac myxomas:**
  - a. May be associated with spotty skin pigmentation
  - b. Are associated with elevated cytokines
  - c. Are associated with an inflammatory status
  - d. Are associated with neuralgia
  - e. May give systemic embolization
10. **Down Syndrome in adults may be associated with:**
  - a. Osteoporosis
  - b. Sleep apnea
  - c. Celiac disease
  - d. Hearing impairment
  - e. Vision impairment

Dear readers,

Since 2006, when *Mædica J Clin Med* was initiated by Prof. Dr. Mircea Cinteza, the journal has been constantly aiming at improving the quality of clinical practice in Romania by both its specialized editorial content and the strong commitment of over 50 national and international reputed scientists serving as its editorial board members, such as Prof. Dr. Mircea Cinteza (the editor-in-chief of *Mædica J Clin Med*), Acad. Prof. Dr. Ioanel Sinescu – Rector of “Carol Davila” University of Medicine and Pharmacy (UMF) in Bucharest, Prof. Dr. Dragos Vinereanu – Pro-Rector of “Carol Davila” UMF, Prof. Dr. Mircea Beuran, Prof. Dr. Adrian Streinu-Cercel and many others.

*Mædica J Clin Med* appears four times a year, under the scientific auspices of “Carol Davila” University of Medicine and Pharmacy in Bucharest. It is accredited by the Romanian College of Physicians (RCP) (10 CME credits/annual subscription + 8 Distance CME credits) and indexed in PubMed (which confers each author 80 CME credits/published paper) as well as in other international scientific databases.

Only subscribers will receive a certificate for 8 Distance CME credits, which will be issued at the end of their subscription period if each subscriber has already sent all the 4 CME quizzes in a year with a grade of at least 75% of the questions correctly solved.
